
FROSTLINE NEWS SUMMER 2008

Wall outdoor water tap and Ellipse hose bracket in copper

Exclusive outdoor designed water tap for fitting in outer walls.

The water tap is especially designed for the up market villa - or cottage owner whom appreciates products where design, functionality and robustness all come together.

Traditionally when you talk outdoor water supply, there is often thought of functionality first of all. The fact that there exists an outdoor tap for connection to the garden hose, when the garden needs watering. But why not combine the handy with the pleasant - with a solution that is also an eyecatcher?

The water tap will over time obtain the familiar copper “patina” and attain the same greenish colour as the buildings copper gutters, down pipes and roof slabs.

A hose bracket, Ellipse, is designed in the same material and high quality as the water tap for railing up of the garden hose.

The water tap is fitted with a male thread which enables the connection of a common garden hose. The connection can be further facilitated by a quick coupling in copper.

Naturally, the water tap is frost proof so the problem with frost bursted water pipes and replacement of a damaged water tap at the beginning of the new garden season is a thing of the past.

Can be bought at all leading plumbers and whole salers.
